Problem of the Week

Problem B

I Love Dogs

Kelsie recently started earning money by walking dogs in her neighbourhood. She earns $8.00 each time she walks a dog. Kelsie walks two dogs per day for the month of November.

Kelsie uses her money to support an animal shelter. Starting on December 1, she donates $18.00 on odd numbered days and $22.00 on even numbered days. Will Kelsie have donated all of her earned money before Christmas Day, December 25th?
