Problems Committee / Comité des problèmes

Fiona Dunbar (Chair / présidente), University of Waterloo, Waterloo, ON
Steve Brown, University of Waterloo, Waterloo, ON
Janet Christ, Saskatoon, SK
Serge D’Alessio, University of Waterloo, Waterloo, ON
Charlotte Danard, Victoria, BC
Jeremy Klassen, Ross Shepherd H.S., Edmonton, AB
Darren Luoma, Maple Ridge S.S., Barrie, ON
Paul McGrath, University of Waterloo, Waterloo, ON
Mohamed Omar, Harvey Mudd College, Claremont, CA
Alex Pintilie, Toronto, ON
David Pritchard, Los Angeles, CA
Mark Skanks, Claremont S.S., Victoria, BC
Laurissa Werhun, Martingrove C.I., Toronto, ON
Overall Comments

Congratulations to all of the participants in the 2023 Euclid Contest. The average score in 2023 was 51.0. We were very pleased that almost all students achieved some success on the early parts of the paper. At the same time, the later parts of these problems managed to challenge the top students.

We at the Centre for Education in Mathematics and Computing believe strongly that it is very important for students to both learn to solve mathematics problems and learn to write good solutions to these problems. Many students do a reasonable job of writing solutions, while others still include no explanation whatsoever.

Special thanks go to the Euclid Committee that annually sets the Contest problems and manages to achieve a very difficult balancing act of providing both accessible and challenging problems on the same paper.

We would also like to thank all participants, both teachers and students. We hope that the papers provided you with some interesting mathematics to think about and play with. Thank you for your support! Please continue to encourage your colleagues and fellow students to become involved in our activities.

Specific Comments

1. Average: 9.0
   Very well done. In part (a), some students did not divide the sum by 5 to calculate the average. In part (b), some students did not find the average after finding the values of $x$ and $y$. In part (c), some students either did not eliminate the answer $t = 4$ or assumed that the only answer was $t = 4$.

2. Average: 8.2
   Very well done. In part (b), some students found the difference between the $y$-intercepts rather than the $x$-intercepts, while others did not find the difference after finding the intercepts. In part (c), some students did not realize that they could calculate the value of $t = -\frac{1}{2}$ in a relatively straightforward way, and some students calculated the value of $t$ incorrectly and used $t = \frac{1}{2}$ or $t = -2$. As solutions continued, some did not substitute $t = -\frac{1}{2}$ in both places where $t$ appears in the equation.

3. Average: 8.3
   Very well done. In part (a), some students forget to include 1 and/or 64 as a divisor, while others added 8 twice in the sum of the divisors. In part (b), some solved for the smallest number on the board and left that as the final answer instead of the erased integer. In part (c), some solutions tried to use a formula for an arithmetic series, but either wrote the formula incorrectly, or did not have the proper components of the formula.

4. Average: 7.8
   Well done. In part (a), some students did not convert the result to minutes. In part (b), some students did not show the result as a whole number percentage but rather as a fraction or decimal value, while others did not eliminate the negative percentage. Some students used trial and error without showing the uniqueness of the solution $A = 15\%$. Other solutions did not show any work after determining an equation in $A$ equal to 391 to finding the value of $A$.

5. Average: 5.9
   Part (a) was well done. The main difficulty was that some students did not seem to know about the discriminant and its role. In part (b), students mostly used the cosine law and sine law or dropped perpendiculars in the triangles. A common error was not being able to use $\sin(\angle TUS) = \frac{4}{5}$ with a perpendicular, or assuming that once the perpendicular was dropped that we must have $b = 5$ and a height of 4.

6. Average: 4.2
   In part (a), many students appeared to use similar triangles without stating that they were similar or why they were similar. There were many approaches using similar triangle, such as the difference of areas of
the similar triangles or areas of trapezoids. A large number of students with the correct answer did not present their solutions well and as a result did not obtain full marks for this part. In part (b), students who used coordinates generally had better presentations of their solutions, although more students than expected stated that the upper right-hand point was \((4, 4)\) and not \((3, 3)\). Students who used triangles often lacked clarity of stating why triangles that they used were similar.

7. Average: 3.3
   In part (a), many incorrect attempts tried to use a probability tree diagram of some sort, which was just not feasible with the number of branching possibilities. More successful attempts that fell short tried to list out all the possible orderings of the marbles. In part (b), there were lots of students who were able to earn part marks for correctly factoring the first equation. Common mistakes included ignoring the constraint \(a < b < c < d\), and incorrectly counting the number of quadruples \((a, b, c, d)\).

8. Average: 2.2
   In part (a), common mistakes included assuming side \(BC\) was the hypotenuse, and incorrectly counting the number of integers (some were off by one while others counted the even and odd integers). In part (b), many students incorrectly used the laws of logarithms, and some earned part marks for obtaining the correct end point(s) of the correct interval.

9. Average: 1.0
   In part (a), we saw the ten different full tables when \(n = 8\) correctly listed relatively often. However, we also often saw missing configurations or extra configurations that did not correspond to a full table (e.g. sets of only two chairs). Parts (b) and (c) were not attempted as often and when we did encounter correct answers, they were not always fully justified. Several students used a recursive approach in part (c) to arrive at the correct answer, but almost none of these students gave sufficient justification as to why the approach worked.

10. Average: 1.1
    As with Problem 9, this last question on the contest was very challenging. When marks were awarded, it was usually in part (a) for correctly recognizing that the third through second last terms of the sum appear in groups of three (e.g. 10 appears three times as \(\left\lfloor \frac{30}{3} \right\rfloor\), \(\left\lfloor \frac{31}{3} \right\rfloor\), and \(\left\lfloor \frac{32}{3} \right\rfloor\)) and for correctly computing the sum of 590. A common mistake in part (b) was to misunderstand the request for a single polynomial and instead provide a different polynomial for each of several (usually 3) different cases/situations. To successfully complete part (c), students needed to understand what was logically required in a proof, gain insight on how this can be accomplished, and to fully justify their reasoning with careful algebraic calculations.

Commentaires Généraux
Félicitations à tous les participants du Concours Euclide 2023. La note moyenne était 51,0. Nous avons eu le plaisir de constater que presque tous les élèves ont eu du succès dans les premières questions. De plus, les dernières parties de ces problèmes présentaient un grand défi pour les meilleurs étudiants.

Le Centre d’éducation en mathématiques et en informatique croit fortement qu’il est très important pour les étudiant(e)s d’apprendre à résoudre des problèmes de mathématiques ainsi que d’apprendre à écrire de bonnes solutions à ces problèmes. Plusieurs étudiants développent leurs solutions raisonnablement bien, tandis que d’autres n’inclus aucune explication avec leurs réponses.

Un grand merci va au comité du concours Euclide qui rassemble annuellement les problèmes du concours et réussit à accomplir la tâche difficile de concevoir des problèmes accessibles et stimulants sur le même examen.

Nous aimerions remercier aussi tous les participants incluant les enseignants et les étudiants. Nous espérons que ces concours ont fourni des mathématiques intéressantes qui vous ont amusés et poussés à réfléchir. Merci pour votre soutien continu!
