Overall Comments

The FGH Contests are designed to give students in Grades 9, 10 and 11 an additional mathematical challenge during the school year, and one that requires full written solutions. Being able to do mathematics is an important skill; being able to communicate one's findings (in mathematics or in any other field) is also very important.

The averages on the Fryer, Galois and Hypatia Contests this year were 22.7, 24.8 and 24.5, respectively. Here are some specific comments on the problems.

We would like to thank all participants, both teachers and students. We hope that the papers provided you with some interesting mathematics to think about and play with. Thank you for your support! Please continue to encourage your colleagues and fellow students to become involved in our activities.

Fryer Contest

1. Average: 8.6

This problem was quite well done. In (b), many students that made errors did not read the question carefully. Some gave the value of the 6th term, some wrote the sum of the 4th, 5th and 6th terms, some did not use terms 4, 5, and 6 to calculate the average. In (c), some students approached this by listing the first 20 terms successfully. When students used the expression $6n - 3$ for the n term, they were very successful. In (d), some students who solved the inequality $6n - 3 > 1000$ and determined $n > 167\frac{1}{6}$ neglected to round up to term number 168. Similar problems occurred with the use of an incorrect formula to generalize the sequence.

2. Average: 7.5

Part (a) was well done overall. Part (b) was largely well done; a common incorrect answer was 100% (the percentage of blue shirts dropped off at Store 2). In part (c), the most common incorrect answer was 33.3%, which is the percentage of green shirts dropped off at Store 2 on Wednesday.

3. Average: 4.2

Part (a) was well done. Errors occurred when students made incorrect assumptions and then used the Pythagorean Theorem. Some students did not read (b) carefully and assumed there was crust along AD . In (c), many students that made errors made proportion assumptions, such as T being in the centre of the square.

4. Average: 2.4

In (a), some students gave an answer of $\frac{1}{3}$, which is the probability that Alice loses. In (b), many students wrote out several correct spinners and many others recognised Darsh's second largest integer must be greater than 5, but progressed no further towards solidly determining the correct answer. In (c), very few students progressed beyond recognizing that $p = \frac{5}{9}$. Some students achieved the correct answer of 20 without sufficiently explaining and justifying their work.

Galois Contest

1. Average: 8.6

Very well done overall. In (c), one common mistake was to ignore the initial two 2×4 plots from (a), giving an answer of 9 instead of 7.

2. Average: 8.5

We were also pleased with how this was done. Many students were not careful enough with keeping track of negative signs when repeatedly doing the operation $(x, y) \xrightarrow{R} (y, -x)$. In (c), some students correctly showed that RRT sends $(9, 1)$ to $(-9, 1)$, but then did not persevere to check what RRT sends $(-9, 1)$.

3. Average: 6.3

Part (a) was well done. For (b) and (c), we saw two common types of mistakes. One common mistake was assuming that there was replacement – this resulted in denominators of 49 instead of 42 or 21. Another

common mistake was how counting was done: some students counted $1 + 2$ and $2 + 1$ as two separate pairs, but then had a denominator of 21; using 21 as the denominator requires you to treat $1 + 2$ and $2 + 1$, for example, as the same outcome.

4. Average: 1.4

Part (a) was well done by students who attempted it. For the students who made a serious attempt at (b), most realized that the leftmost column determines how the remaining grid entries must be filled in, but very few realized the need to check whether or not the resulting 3×5 grids were in fact Griffin Grids. It is a coincidence that there are 8 ways to fill in the leftmost column, and the answer to (b) is 8; see (c) for more about this.

Hypatia Contest

1. Average: 9.1

Overall, this question was really well done. The most common mistake was an answer of 81 in (c). Since 46% of all trucks were black and 44% of trucks sold were black, some wrongly assumed that the number of unsold trucks is $46\% - 44\% = 2\%$ of 4050.

2. Average: 8.1

Parts (a) and (b) were very well done. In (c) many students found the correct answers of 192 and 201, but did not fully justify that these were the only solutions. Some students only found the solution where the first digit was 1.

3. Average: 6.1

Parts (a) and (b) were well done. A common mistake was to find the area of $DCFE$ instead of the required area. Another common mistake was assuming that DG is parallel to EF . Some students tried to use similar triangles or trigonometry and made assumptions that were not justified.

4. Average: 1.2

Some students correctly solved (a). Correct solutions to (b) and (c) were very rare. In (b), even when a correct algebraic expression was given, students really struggled to manipulate the expression in a way to find necessary conditions to guarantee divisibility by 216. In (c), some students made progress using modular arithmetic.

Please visit our website at cemc.uwaterloo.ca to download the 2024 Fryer, Galois and Hypatia Contests, plus full solutions.

Commentaires généraux

Les concours de FGH ont été créés pour donner aux étudiants de 9e, 10e et 11e année (sec. III, IV et V) un défi mathématique supplémentaire pendant l'année scolaire qui exige des solutions écrites complètes. Être capable de faire des mathématiques est une aptitude importante. Pouvoir communiquer ses conclusions (en mathématiques ou autres domaines) est aussi très important.

Cette année, les moyennes des concours Fryer, Galois et Hypatie étaient de 22,7, 24,8 et 24,5 respectivement. Voici quelques commentaires spécifiques sur les problèmes de ces examens.

Nous aimerions remercier tous les participants incluant les enseignants et les étudiants. Nous espérons que ces concours ont fourni des mathématiques intéressantes qui vous ont amusés et poussés à réfléchir. Merci pour votre soutien continué!

Concours Fryer

1. Moyenne: 8,6

Ce problème a été assez bien réussi. Dans la partie (b), beaucoup des élèves qui ont fait des erreurs n'ont pas lu la question attentivement. Certains ont donné la valeur du 6^e terme, d'autres ont écrit la somme des 4^e, 5^e et 6^e termes, d'autres encore n'ont pas utilisé les termes 4, 5 et 6 pour calculer la moyenne. Dans la partie (c), certains élèves ont abordé la question en énumérant les 20 premiers termes avec succès. Lorsqu'ils ont utilisé l'expression $6n - 3$ pour le terme n , ils ont très bien réussi. Dans la partie (d), certains élèves qui ont résolu l'inégalité $6n - 3 > 1000$ et déterminé $n > 167\frac{1}{6}$ ont négligé d'arrondir au terme numéro 168. Des problèmes similaires se sont posés lors de l'utilisation d'une formule incorrecte pour généraliser la séquence.

2. Moyenne: 7,5

La partie (a) a été bien réussie dans l'ensemble. La partie (b) a été en grande partie bien réussie; la réponse incorrecte la plus fréquente était 100% (le pourcentage de chemises bleues déposées au magasin 2). Dans la partie (c), la réponse incorrecte la plus fréquente était 33.3%, soit le pourcentage de chemises vertes déposées au magasin 2 le mercredi.

3. Moyenne: 4,2

La partie (a) a été bien réussie. Des erreurs se sont produites lorsque les élèves ont fait des suppositions incorrectes et ont ensuite utilisé le théorème de Pythagore. Certains élèves n'ont pas lu attentivement la partie (b) et ont supposé qu'il y avait une croûte le long de AD . Dans la partie (c), beaucoup des élèves qui ont commis des erreurs ont fait des suppositions de proportion, comme le fait que T soit au centre du carré.

4. Moyenne: 2,4

Dans la partie (a), certains élèves ont donné une réponse de $\frac{1}{3}$, qui est la probabilité qu'Alice perde. Dans la partie (b), beaucoup des élèves ont écrit plusieurs bonnes réponses (avec roulettes) et beaucoup d'autres ont reconnu que le deuxième plus grand entier de Darsh doit être plus grand que 5, mais ils n'ont pas progressé plus loin dans la détermination de la bonne réponse. Dans la partie (c), très peu des élèves ont progressé au-delà du fait de reconnaître que $p = \frac{5}{9}$. Certains élèves ont obtenu la réponse correcte de 20 sans expliquer et justifier suffisamment leur réponse.

Concours Galois

1. Moyenne: 8,6

Ce problème a été dans l'ensemble très bien réussi. Dans la partie (c), une erreur fréquente a été d'ignorer les deux tracés initiaux 2×4 de la partie (a), ce qui a donné une réponse de 9 au lieu de 7.

2. Moyenne: 8,5

Nous avons également été satisfaits de la façon dont ce problème a été abordé. De nombreux élèves n'ont pas fait assez attention aux signes négatifs lorsqu'ils ont répété l'opération $(x, y) \xrightarrow{R} (y, -x)$. Dans la partie (c), certains élèves ont correctement montré que RRT envoie $(9, 1)$ à $(-9, 1)$, mais n'ont pas persévéré pour vérifier où RRT envoie $(-9, 1)$.

3. Moyenne: 6,3

La partie (a) a été bien réussie. Pour les parties (b) et (c), nous avons constaté deux types d'erreurs courantes. L'une d'entre elles consistait à supposer qu'il y avait remplacement, ce qui a donné des dénominateurs de 49 au lieu de 42 ou 21. Une autre erreur fréquente concernait la manière de compter: certains élèves comptaient $1 + 2$ et $2 + 1$ comme deux paires distinctes, mais avaient alors un dénominateur de 21; utiliser 21 comme dénominateur nécessite de traiter $1 + 2$ et $2 + 1$, par exemple, comme le même résultat.

4. Moyenne: 1,4

La partie (a) a été bien réussie par les élèves qui ont tenté de la résoudre. Pour les élèves qui ont fait une tentative sérieuse pour la partie (b), la plupart ont compris que la colonne la plus à gauche détermine la façon dont les entrées restantes de la grille doivent être remplies, mais très peu ont compris la nécessité de vérifier si les grilles 3×5 qui en résultent sont en fait des grilles Griffin. C'est une coïncidence qu'il y ait 8 façons de remplir la colonne la plus à gauche, et que la réponse à la partie (b) soit 8; voir la partie (c) pour plus d'informations à ce sujet.

Concours Hypatie

1. Moyenne: 9,1

Dans l'ensemble, ce problème a été très bien réussi. L'erreur la plus fréquente a été une réponse de 81 dans la partie (c). Étant donné que 46% de tous les camions étaient noirs et que 44% des camions vendus étaient noirs, certains ont supposé à tort que le nombre de camions invendus était de $46\% - 44\% = 2\%$ de 4050.

2. Moyenne: 8,1

Les parties (a) et (b) ont été très bien réussies. Dans la partie (c), de nombreux élèves ont trouvé les réponses correctes de 192 et 201, mais n'ont pas entièrement justifié qu'il s'agissait des seules solutions. Certains élèves n'ont trouvé que la solution où le premier chiffre était 1.

3. Moyenne: 6,1

Les parties (a) et (b) ont été bien réussies. Une erreur fréquente a été de trouver l'aire de $DCFE$ au lieu de l'aire requise. Une autre erreur fréquente a été de supposer que DG est parallèle à EF . Certains élèves ont essayé d'utiliser des triangles similaires ou la trigonométrie et ont fait des suppositions qui n'étaient pas justifiées.

4. Moyenne: 1,2

Certains élèves ont correctement résolu la partie (a). Les solutions correctes aux parties (b) et (c) étaient très rares. Dans la partie (b), même lorsqu'une expression algébrique correcte était donnée, les élèves ont vraiment eu du mal à manipuler l'expression de manière à trouver les conditions nécessaires pour garantir la divisibilité par 216. Dans la partie (c), certains élèves ont progressé en utilisant l'arithmétique modulaire.
